I.) Introduction

A. “Zion national park is one of the smallest national parks.”

B. It is located in southern Utah.

C. It is 148,733 acres.

D. Secular scientists think that the earth is billions of years old but they're wrong.

II.) Body

A. If evolution was real the national parks like Zion National Park wouldn't be here today.

1.) Zion is a great way to prove secular scientists wrong. Here are some of the reasons; if Noah's flood didn’t happen Zion’s arches would have eroded and cave in.

2.) There would be no sandstone peaks.

B. When people say it's their worldview vs. our worldview they are wrong it is actually religion vs. science.

1.) But when secular scientists come up with more lies on how things are created, Non-evolutionists laugh in their faces and tell them true, <u>solid</u> facts.

C. Non-evolutionists and evolutionists only can agree on one thing: Someone or something created them.

III.) Conclusion

A. Secular scientists think the world is billions of years old but when we look at Zion National Park we have enough evidence to prove them wrong.

1.) The sandstone arches are one example of this because if the earth was billions of years old then the arches would erode and collapse.

2.)Also the sandstone formations will collapse too.

B. The problem with evolutionists is that they don’t want to believe that there is someone who is superior to them.

1.)Charles Darwin (the creator of evolution) even renounced evolution on his deathbed.

C. These were his words "How I wish I had not expressed my theory of evolution as I have done.”
